PROJECTS

Grace Shopper | Full Stack Developer | [Deployed Site](#)

October 2021

A full stack ecommerce website built using HTML, CSS, Javascript and React for the front end, Express, Node.js, and PostgreSQL on the back end.

Collaborating on a team with 2 other developers.

- Created the database structure, and database adapter functions to be used on the server
- Drafted a fun and welcoming UI for potential customers to enjoy
- Use the front end to create/read/update/delete data on the back end, and use the back end to pull data to the front end

Arcade-Snake Game | Frontend Developer | [Deployed Site](#)

August 2021

Fully functioning snake game. Eat the apples and grow the snake, with varying difficulties and a non-persistent scoreboard.

- Created using HTML, CSS, and Javascript
- Styled to look like a retro arcade

Retro-Draw | Frontend Developer | [Deployed Site](#)

May 2021

Frontend Drawing app where users can create simple art, fun for the whole family

- Created entire layout and functionality of the app
- Built with React, upgraded from an older version which used only HTML and CSS

EXPERIENCE

Uber, Phoenix — Cybersecurity Engineer

September 2020 - May 2021
